Business Challenges:

Trioquest were looking for a cost-effective way to evaluate whether their existing buildings qualified as LEED Platinum, Gold or Silver status before going through the formal LEED Certification Program.

Our Solution:

Refined Data Questionnaire Builder Module

Trioquest used the custom questionnaire builder in the Refined Data software solution to develop an exceptionally versatile survey. The survey assigned a score to a building based on the responses to questions Trioquest developed after reviewing the LEED standards. The survey generated a final score for each building that allowed Trioquest to determine if the building was LEED Platinum, Gold or Silver status, saving in excess of \$15,000 per building.

Specific Features:

The Questionnaire Builder allows you to assign a custom score to each question, based on the user response. You can even have multiple scores associated with a given question to assess different standards from the same questionnaire. The questionnaires are also dynamic and are able to show and hide questions on the fly based on the user response, so they are quick and easy to complete. The tool also comes with a dashboard system that allows you to track which sites have completed their questionnaire and who needs a gentle reminder!

Business Benefits:

The assessments were later validated by LEED consultants and found to be **100% accurate**, saving in excess of \$15,000 per building.

Use cases:

The use cases for the Questionnaire Builder are virtually unlimited. From simple polls to tenant surveys to dynamic surveys that configure themselves based on property type; the possibilities are endless.
